Northern Pacific & Western Pacific AAR 1942 Design 10' 6" IH Boxcars

The Northern Pacific bought and built 2000 AAR 1942 design 10' 6" IH boxcars from ACF, Pullman and their Laurel shops in 1941-42. This was one of the largest blocks of such cars. The NP employed Superior doors on the Pullman order and Youngstown doors on the ACF and Laurel orders. All cars received wood running boards. The cars were numbered 26000-27999. The Laurel and Pullman orders received National Type B-1 trucks and the ACF cars had ARA design cast side frame trucks. The N.P. cars came in the traditional arched road name and three color herald.

The Western Pacific bought '42 design cars in 1945 from Mount Vernon. These had Apex running boards and either Barber Stabilized

(similar to ARA design) or ASF Ride Control trucks. These were the road's 20201-20550 series. The cars arrived with white lettering and white herald with black background. When repainted in the early 1950s, they received aluminum lettering and herald with black background. The W.P. cars also received a Royal F slack adjuster.

The continuing series of variations of AAR 1942 design 10'6" IH boxcars features the combination of gray castings for sides, ends and underframe with an injection molded plastic roof. The appropriate commercial detailing parts are included in the kits. Proprietary decals are provided. As usual, a Prototype Data Sheet and full instructions are included.

- ___ Kit 31.24 NP ACF blt 26000-27349 series/Laurel blt 27350-27499 series, Y'town door, wood running board, decals for original lettering, \$27
