DOUBLE TRUSS AAR 50-TON TRUCKS

“Self-Aligning Spring-Plankless Double Truss Truck” is the full name for this truck design. Introduced in early 1936, it quickly became popular for new freight cars built up into the mid 1940s. The Double Truss feature strengthened the spring seat area allowing room for more springs.

All our trucks feature one-piece black acetal plastic moldings with separate brake shoe detail, and non-magnetic, insulated metal RP-25 contour wheelsets. Trucks are also available with "semi-scale" (.088" wide) wheels.

- TMW-107** Double Truss AAR 50-Ton Trucks,
with wheelsets
- TMW-207** Double Truss AAR 50-Ton Trucks,
with "semi-scale" wheelsets
